

## **POLICY FOR EFFICIENT USE OF ENERGY RESOURCES**

---

Novamine Chile SpA is a regional company led by a woman who is dedicated to developing hydraulic equipment with high-impact innovation. The safety of people is the central focus of all its solutions and seeks to satisfy the current and future needs that mining companies in Chile and the world have in the area of maintenance and to achieve this, the company has proposed to form high-performance teams and create a culture of excellence in everything we do.

Novamine Chile SpA is committed to developing its activities focusing on caring for the environment by using energy sources appropriately and efficiently, both for its workers and collaborators.

Consequently, it strengthens its commitment to:

- Check and maintain tires at the correct pressure to save fuel.
- Unplug electrical appliances when they are not in use.
- Turn off the lights when leaving a place.
- Promote awareness-raising behaviors that prevent or reduce the emission of carbon dioxide into the atmosphere, either by reducing the use of motor vehicles that emit CO<sub>2</sub>, or choosing to share vehicles with companions.
- Promote the energy efficiency policy in order to encourage the training, participation and awareness of workers and suppliers in the responsible use and consumption of energy.
- Incorporate the use of renewable energy in the workplace.
- Promote and maintain continuous improvement in energy performance, creativity and technological innovation, campaigns, awareness at all levels of the organization, defining energy use and consumption standards, process and project design, purchases of energy efficient equipment and services.
- Teleworking to reduce staff transport.
- Upgrade lighting equipment to low-consumption models and use timers and mobility sensors.
